Why Smart Dental Clinic System?

Dental Clinics in western world mainly vary in size, number of doctors and number of chairs.

Mostly, a single dentist would be able to serve as many as 15 chairs provided he has the efficient work flow on demand system.

Smart G4 has designed a system that is customized to fit small to large dental clinic sizes adding maximum efficiency and technological look and feel to the clinic.

Such system would help not only the dentist, but also the administration, nurses and hygienist as well as lab and x-ray to have more efficient and active flow on demand within their dental clinic workspace.

SYSTEM COMPONENTS CLINIC and HYGIENIST
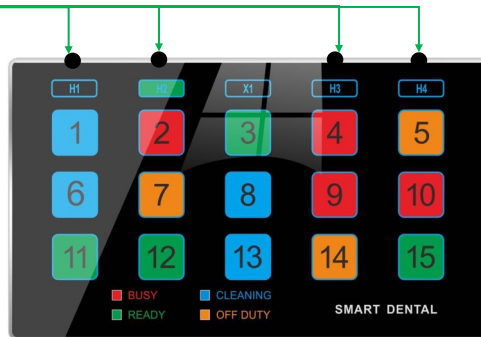

Clinic Number

Ready Means: Next Patient can Enter
